

European Alleyway (Work In Progress)

A technical case study focused on authoring a procedural PBR material library and building a "lifelike environment" using modern AAA workflows.

All assets and materials in this study were created entirely from scratch by me. This project demonstrates the complete environment art pipeline, from procedural texturing to modular asset creation.

- Materials: Authored a 100% procedural PBR material library (plaster, cobblestone, brick) in Substance Designer.
- Assets: Responsible for the entire asset pipeline: high-poly sculpting (Zbrush), modeling (Maya), baking, and texturing.

* Developed with professional feedback and guidance from Sarah Swenson (Senior Environment Artist, Naughty Dog).
